

Deadzone E-process ($\delta = 0.75$, $\lambda = 0.5$) on the VAE panel
PIT = ar1, $\alpha = 0.1$ (threshold 10), event = any rating transition within 24 months

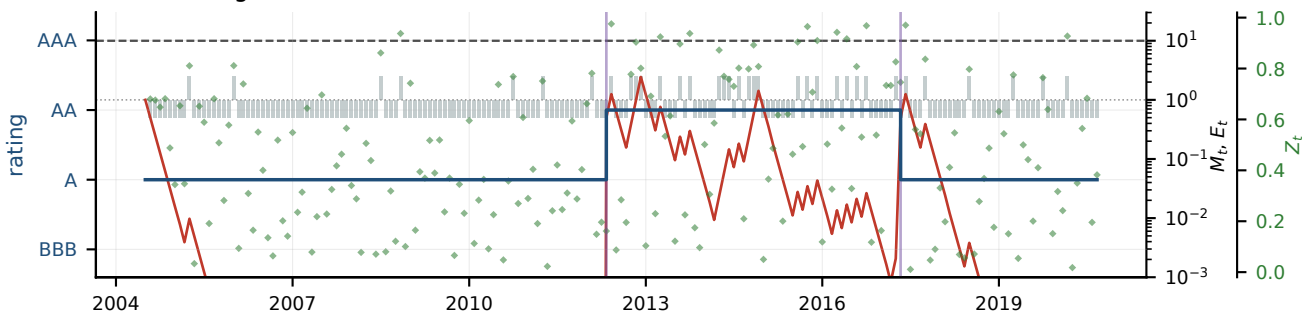

(A) true positive — the alarm precedes a transition — US911312AJ59

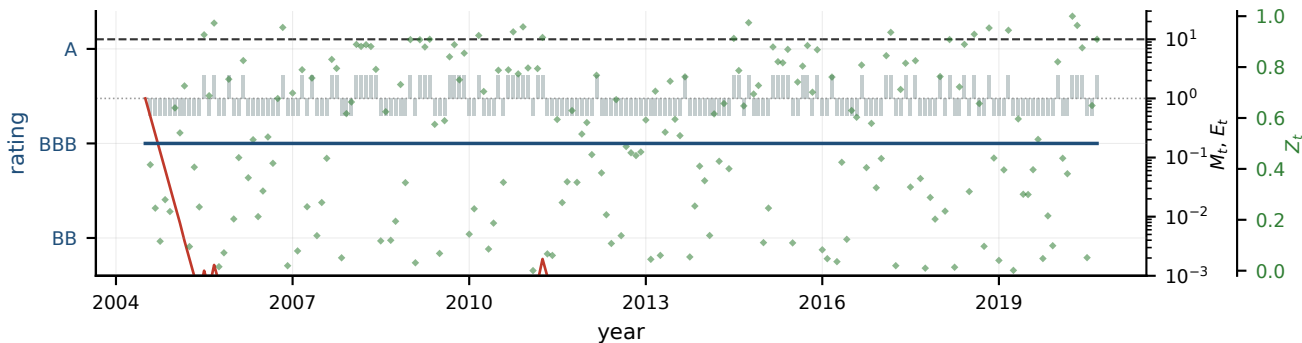

(B) false positive — the alarm fires, no transition follows — US742718DF34

(C) false negative — the transition arrives unannounced — US459200AM34

(D) true negative — a quiescent bond, correctly left alone — US25179SAD27

— agency rating - - - threshold $1/\alpha$ ● PIT Z_t
— rating change - - - alarm ■ single-step E_t
